We Are Unforgettable

We are proud to announce the achievements of our team of academics who have been awarded grants by the Chartered Association of Business Schools (CABS) in its report on ‘Business Schools and the Public Good’. It is very good to see evidence of work in our local neighbourhood as well as our global reach. I am pleased to see the high level of student engagement and contribution to our research and our students have been acknowledged by the CABS in the report.

The grants have been awarded to researchers from all areas of the School, with funds supporting projects that aim to address challenges presented by the pandemic. The funding may be used to get access to archives, purchase datasets, or to provide samples, or to purchase datasets which allow researchers to continue their work even in the face of the restrictions in place to protect against COVID-19. This demonstrates the resilience and adaptability of our researchers in the face of the pandemic. The funding will enable researchers to continue their work, which is vital for the advancement of knowledge and the benefit of society.

The lead academics on the projects awarded are:

- Sofia Izquierdo-Sanchez
- Alper Kara
- Hira Younas
- Mohammad Bakarat
- Luisanna Onnis

Future Editions of Research Update

Our next Summer Research Update will be published in July, and we are encouraging all our researchers to submit their work. The deadline is 12th July, and we are looking forward to receiving a wide range of research outputs from our team.

Research Centre Update: BRC

The Business Research Centre (BRC) has been awarded funds by the Chartered Association of Business Schools (CABS) in its report on ‘Business Schools and the Public Good’. The BRC is funding a project entitled ‘Analysis of the Nexus of Sustainable Forest Management and Commercial Honey Trade’ led by Dr Janine Lowore, an Assistant Professor in Tourism Management, and a team of students from the Business School. The project aims to analyse the sustainability of honey trade in Zambia, a country that has a high potential for honey production.

The project is being undertaken in collaboration with the University of Zambia, and will involve the analysis of the relationship between sustainable forest management and commercial honey trade. The project will involve the collection of data on the sustainability of honey production in Zambia, and will aim to identify best practices for sustainable honey production. The project is expected to provide valuable insights into the sustainability of honey trade, and will contribute to the development of sustainable tourism practices in Zambia.

PGR Update

The PGR community has been very active over the past few months, with many students completing their research and submitting their theses for examination. We are proud of the achievements of our PGR students, and we would like to congratulate them on their success.
