

Season's Greetings from the University of Huddersfield

Sustainability will be at the heart of the University of Huddersfield's major revamp of its historic 140-year-old Grade 2 listed Ramsden Building. During the work many forgotten features of the building have been revealed, which have been hidden away since it was opened as part of the Huddersfield Technical School and Mechanics' Institute in 1884.

We look forward to reopening the building in 2026!

The Ramsden Building

HUDDERSFIELD
Inspiring global professionals

Renewing a rich heritage for the twenty-first century

- A new heating system will contribute to our drive towards decarbonisation, creating a building that will be Net Zero when in operation.
- The central courtyard will be viewed once more with new roof lights allowing natural light into the space.
- A new event space will be created with a stunning large stained-glass window.
- New communal areas will be available for students and staff to gather.
